By Janis Osis : Model-Driven Domain Analysis and Software Development: Architectures and Functions agile software development describes a set of values and principles for software development under which requirements and solutions evolve through the collaborative software development life cycle sdhc overview will give you a detailed description about different software development methodologies and business models Model-Driven Domain Analysis and Software Development: Architectures and Functions:

Software developers use different techniques for identification and specification of a domain's characteristics and requirements for a planned application. The importance of this step cannot be understated as it is impossible to be highly efficient with a weak beginning even with a strong end of the software development life cycle. Model Driven Domain Analysis and Software Development Architectures and Functions displays how to effectively map and re>About the Author Janis Osis graduated Latvian University cum laude and received diploma of Electrical engineering in electrical systems 1953. Dr. Sc. in automation from Kaunas Technological University Lithuania 1961. Dr. habil. Sc. in system an
